AACA Annual Meeting **June 17-21**

This Year's Presidential Speaker: Bill Hayes

"Dissecting Gray's Anatomy"

The classic medical text known as Gray's Anatomy, published in 1858, remains one of the most well known books in the English language. More than 160 years later, it has never gone out of print and its publication is recognized as a turning point in medical history. Despite the book's legacy, little was known about its author and illustrator until acclaimed science writer and memoirist Bill Hayes came across a photograph of Henry Gray that seized his curiosity and inspired his nonfiction book "The Anatomist: A True Story of Gray's Anatomy". In this program, Hayes articulates the medical, historical, and artistic significance of Gray's Anatomy;

shares the fascinating tale of its creation, which he pieced together largely from long-forgotten letters and diaries written by the book's original illustrator, anatomist Henry Vandyke Carter; and describes his unforgettable experience of a year spent in an anatomy lab, alongside medical students at UCSF, performing many of the dissections originally detailed by Gray and Carter.
